

TP 0 : prise en main du langage

Compiler, exécuter et comprendre chacun des programmes suivants.
Les fichiers correspondants sont en ligne à l'adresse <http://lpma-paris.fr/~roux/>.

Programme 1

```
#include <iostream>

3 int main(void)
{
    if (0.1 + 0.2 == 0.3)
        {
            std::cout << "0.1 + 0.2 vaut 0.3\n";
        }
9 else
    {
        std::cout << "0.1 + 0.2 ne vaut pas 0.3\n";
    }

    return 0;
15 }
```

Programme 2

```
#include <iostream>

3 int main(void)
{
    std::cout << "1/3 + 1/3 + 1/3 vaut " << 1/3 + 1/3 + 1/3 << "\n";
9     return 0;
}
```

Programme 3

```
#include <iostream>

3 int i = 1;

5 void f(int i)
{
    i = 2;
}

9

int main(void)
12 {
    std::cout << "Avant la declaration,\ti = " << i << "\n";

15    int i = 3;
    std::cout << "Apres la declaration,\ti = " << i << "\n";
    f(i);
    std::cout << "Apres l'appel de f,\ti = " << i << "\n";
18    {
        int i = 4;
21        std::cout << "Dans le bloc entre {},\ti = " << i << "\n";
    }
    std::cout << "Hors du bloc,\t\ti = " << i << "\n";
24
    return 0;
}
```

Programme 4

```
#include <iostream>

3 int main(void)
{
    int i;
    i = 1+1;
    if (i=3)
    {
9        std::cout << "1+1 = 3\n";
    }

12    return 0;
}
```

Programme 5

```
#include <iostream>

3
int main(void)
{
    std::cout << "Si i vaut 2,\n";

    int i = 2;
    std::cout << "(i=1) renvoie " << (i=1);
    std::cout << "\tpuis\t i vaut " << i << "\n";

12   i = 2;
    std::cout << "(i==1) renvoie " << (i==1);
    std::cout << "\tpuis\t i vaut " << i << "\n";

15   i = 2;
    std::cout << "(i++) renvoie " << (i++);
    std::cout << "\tpuis\t i vaut " << i << "\n";

18   i = 2;
    std::cout << "(++i) renvoie " << (++i);
    std::cout << "\tpuis\t i vaut " << i << "\n";

21   i = 2;
    std::cout << "(i+=1) renvoie " << (i+=1);
    std::cout << "\tpuis\t i vaut " << i << "\n";

24   i = 2;
    std::cout << "(i*=2) renvoie " << (i*=2);
    std::cout << "\tpuis\t i vaut " << i << "\n";

27
    i = 2;
    std::cout << "(i**2) renvoie " << (i**2);
    std::cout << "\tpuis\t i vaut " << i << "\n";

30
    return 0;
}
```

Programme 6

```
#include <iostream>

3
int main(void)
{
    int x = 0.5;
    if (x == 0)
    {
        std::cout << "0.5 est egal a 0.\n";
    }

12   return 0;
}
```

Programme 7

```
#include <iostream>

3 int main(void)
{
6   std::cout << 0100 << "\n";
9   std::cout << 0x10 << "\n";
12  std::cout << 1.1e4 << "\n";
15  std::cout << 0x1.8p10 << "\n";
    return 0;
}
```

Programme 8

```
#include <iostream>
#include <cmath>
3
6 const int N = 100;
const double alpha = 2*M_PI/N;

9 int main(void)
{
12   float x=0;
double y=0;
for (int i=0; i<N; i++)
{
15     x += 1000*cos(i*alpha);
     y += 1000*cos(i*alpha);
}
18
std::cout << "Valeur theorique :\t0\n";
std::cout << "Valeur 1 :\t\t" << x << "\n";
std::cout << "Valeur 2 :\t\t" << y << "\n";
21
return 0;
}
```

Programme 9

```
#include <iostream>

3 unsigned fact(unsigned n)
{
  int resultat = 1;
6   for (unsigned i=1 ; i<=n ; i++)
  {
    resultat *= i;
9   }
  return resultat;
}

12 int main(void)
{
15   for (unsigned n=0; n<37; n++)
  {
    std::cout << fact(n) << "\n";
  }
18
return 0;
}
```
